DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because the abstract contains more than one paragraph. Correction is required. It is advised that the abstract should be short and precise, with no more than a paragraph. See MPEP § 608.01(b).
2. The disclosure is objected to because of the following informalities: it appears that the specification fails to disclose the subject matter "the amplitude of each sound field versus angle changes opposite each" as specified in claim 2.

Appropriate correction is required. No new matter is allowed.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claim 2 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification as originally filed fails to disclose that over an included angle there between two nonparallel sound fields, the amplitude of each sound field versus angle changes opposite the other. Fig. 10A illustrates a graph with three different responses with three different angles. However, the smallest angle (0 degree) does not have the highest amplitude response. It is the angle at 325 degrees providing the

highest amplitude level. This contradicts the claimed limitation. Furthermore, it is unclear of the purpose of this limitation.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Gefvert (US 5,533,129).

Gefvert discloses a stereo surround sound reproduction system comprising in combination at least one loudspeaker (10) having at least two drivers (72, 76), at least two channels from an electric signal source (78). Although not clearly shown, the sound fields are partially superimposed to surround the listener.

7. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by McShane (US 5,117,459).

McShane discloses a stereo surround sound reproduction system comprising in combination at least one loudspeaker (10a) having at least two drivers (32a, 30a), at least two channels from an electric signal source (Fig. 2). The partially superimposed sound fields are shown in Fig. 1.

Regarding claim 2, McShane shows the two sound fields emanating in non-parallel directions substantially from a point in space in plan view. Although not

explicitly shown, the maximum and the minimum of each sound field are inherently existed. The functional "whereby" clause does not serve to distinguish.
